Description of function:
In normal state (view indicator angle and reset button in drawn position (i.e. "ZU" is visibly)) is a connecting between VA and CA as well between VZ and CZ. When control the priority valve double-pipe over the CO2-input, the connections CO2 and CA are connected and the connection CZ is exhaust. The connections VA and VZ will be closed off and the view indicator angle shows "AUF:" CO2 has always priority compared to the connections VA and VZ.

Releasing:
Pneumatic releasing via applying the min. control pressure at connection CO2

Mounting:
1) Connections:
   CA .............. outlet OPEN
   CZ .............. outlet CLOSE
   VA .............. input OPEN
   VZ .............. input ZU
   CO2 .............. priority connection OPEN
2) Variable mounting position. Make sure that the required place for the control slider is available.
3) For our 1/8” connection threads we recommend to use screw connections with taper thread and to seal these in position using a liquid sealant (e.g. Loctite 243). It must be ensured that the liquid sealant is applied to the external thread.

Commissioning:
1) Deeply press reset button in the correct position. In normal state the reset button stick out approx. 1mm of the housing (resp. 8mm with view indicator angle). 2) After releasing, repeat process.

Technical data:
- max. operating pressure (connections CO2, CA, CZ) 60bar
- max. operating pressure (connections VA, VZ) 16bar
- min. control pressure for CO2-connection 4bar
- nominal width of valve 4mm
- ambient temperature range -25°C - +80°C (2h 110°C)
- VdS approval no. G590014

Scope of supply:
Screw connections are NOT included in the scope of supply!
